

Personal Information Management System.

A project done by Web_Park for Sunmorteck Company (Japan)

CONCEPT

Every business organization needs to learn about all the employees working for the business company. PIMS is a concept used to help an organization keep the track of all its employee. With the help of PIMS software, the organization will be able to organize the employee's access to a particular system. The system can be any organization's unit or department. Further the organization will also be able to set the employees's **risk view point** to the system.

The screenshot shows a web browser window titled "個人情報保護活動支援システム - Microsoft Internet Explorer". The address bar is empty. The page content includes a header with the system name and a user login area. The main content area features a central menu with several options, and a right-hand sidebar with a "メニュー" (Menu) button and two sub-items: "保護特定情報" (Protection Specific Information) and "リスク管理情報" (Risk Management Information).

Platform Used

The project is developed by **Web_Park** Nepal for **Sunmoretec** Company in Japan. The project was developed in JSP as front end and **PostGreSQL** as its backend database server. The project is a web-based application hence can be accessed locally as well as over the Internet. The project was tested using **JBoss** Server. The project can be viewed and edited in Japanese language, this was possible by the use of unicodes for Japanese Language.

Some Features

1. System Master can keep the records of all types of system in organization.
2. Group Master stores the information of the various branches of the organization.
3. Personal Info Master keeps record of various persons.
4. Risk Analysis stores the risk view point of accessing the system.
5. Role of particular person can be defined using the Role Authority Master.
6. Common info master stores all common information of employee and other personnel
7. Related Data Master keeps the relation of the employees and other personals.
